

Dec 12, 2011

Hello Stephen and Sharon -

It has come to our attention recently that there were some errors in the Date/Times or Locations recorded for Observations from Cruises 2, 3 and 4, and that there was an error made transcribing the location values for one sonar contact from Cruise 14.

I have made the necessary corrections to the relevant tables and have attached the database (Obs_LogsData.mdb) for you.

I am sorry for this - Murphy's Law that it was discovered after the database was released!

I hope you have a great Christmas and New Year .

Regards

Christine Trefry

Hi Sharon,

I have reviewed the Obs_LogData.mdb revised file and concluded that there will not be any changes to files in the data archive. The photos (~.jpg) and chromatogram (~.jpg) files will have no changes.

I did a GIS analysis of the Sonar Contacts tables by importing the tblSonarContacts_Original and the tbsSonarContacts_Revision and overlayed the two point files. I found one point with a different coordinate. Not a big deal. won't affect out bounding coordinates in the metadata records.

The only action is to overwrite the Obs_LogData.mdb original file with the revised version.

Thank you,
Kevin,
