CC: "Delgado.Eric@epamail.epa.gov" <Delgado.Eric@epamail.epa.gov>, "ERTSupport@epamail.epa.gov" <ERTSupport@epamail.epa.gov>

The BP project has been published. I have cc'd ERT. Please work your magic!!!

Paul, here is a list of exceptions and valid value additions. All other issues in the validation report have been addressed.

- TICs will not have MDL, RL, or Quantitation Limits.
- Datum cannot be populated. These samples were collected by BP. Other than the actual coordinates, I do not have the details for the coordinate system used. I will be happy to enter something if someone can get this information.
- MDLs have been populated where they are available. All remaining blanks do not have this information provided by the EPA laboratory.
- MDL units have been added where a MDL value was added. All remaining blanks will remain null.
- Lab Result Qualifier and Result Qualifier – Please add URL and UL to the list of valid values. U indicates the associated analyte is not detected. RL indicates the reporting limit is raised because absence or presence at the routine or lower value could not be verified. L indicates the reported value is biased low.
- Analyte – Please add Trimethylbenzene Isomer to the list of valid values. This is a TIC reported by the EPA lab.

Please let me know if anything comes up when the validation is run again.
