

In response to a 2004 petition filed by the Center for Biological Diversity (CBD) the National Marine Fisheries Service (NMFS) added elkhorn (Acropora palmata) and staghorn (A. cervicornis) corals to the Endangered Species Act's list of threatened species as of May 9, 2006. As threatened species, the prohibitions in Section 9 of the ESA do not automatically apply upon listing as they would for species listed as endangered. Therefore, NMFS must determine which, if any, of the section 9 ESA prohibitions are necessary and advisable to provide for the conservation of the species. Prohibitions would be applied to the corals through a 4(d) rule. Additionally, NMFS has not more than one year from the published date of the final listing rule to designate critical habitat for both species, if prudent for the purposes of the ESA.

In May 2006, NMFS sponsored seven *Acropora* Conservation Workshops in the following locations to gather information for a possible 4(d) rule and designation of critical habitat:

- Dania Beach, Florida
- Key Largo, Florida
- Marathon, Florida
- Key West, Florida
- Kingshill, St. Croix, U.S. Virgin Islands
- Charlotte Amalie, St. Thomas, U.S. Virgin Islands
- San Juan, Puerto Rico

For potential workshop participants unable to attend one of the workshops, provisions were made for the submission of comments, relevant to the development of a 4(d) rule and designation of critical habitat, via mail, fax, or email until June 2, 2006. Additionally, the workshop presentation, informational handouts, and other relevant materials were made available online prior to the workshops (see <a href="http://sero.nmfs.noaa.gov/pr/protres.htm#acropora">http://sero.nmfs.noaa.gov/pr/protres.htm#acropora</a>). Hard copies of the presentation, informational handouts, and other relevant materials were distributed to workshop participants at each location.

The workshops were structured into a format conducive to focused and productive discussions, as these were intended to be constructive brainstorming and information collecting sessions. Thus, following a brief overview presentation by NMFS SERO staff that covered the progression of events leading up to the workshops and the implications of a threatened listing, the workshop participants broke out into three working groups. The working groups were organized into the following interest groups:

Fishing, Diving, and Recreational Activities

- Coastal and Nearshore Construction and Related Activities
- Research and Recovery

Examples of possible discussion topics within each grouping were provided to help participants organize themselves into one of the three groups (see workshop presentation). The discussion was guided by several focus questions (see the workshop presentation for specific questions). The facilitator for each group recorded the issues discussed on a flip chart. The notes taken on these flip charts were transcribed into an MS Excel spreadsheet, which also includes the comments received from mail, fax, and email submissions. The contents of these spreadsheets are included in this summary document.

Following the discussions of each of the three working groups, participants were brought back together. The working group leader (i.e., one of the NMFS SERO staff members) verbally summarized the outcomes of each of the three discussions for all of the workshop participants. After these summaries were completed, the NMFS SERO staff opened the floor to comments and general questions from the participants about the workshop, the working group discussions, and the next steps for both elkhorn and staghorn corals. The comments and questions discussed at the end of all seven of the workshops as well as the comments received from mail, fax, and email submissions are included in this summary document.

**DISCLAIMER:** NOAA Fisheries Service will consider the input received that is relevant to the determinations required for the 4(d) and critical habitat rulemakings.

recreational fishing	anchor; hook/line	few restrictions; moorings	
	(not a lot);		
	spearguns; losts of		
	[s?] fishing		
recreational fishing - castnet	grass beds (for		
	bait)		
recreational fishing - hook/line	entanglement of		
	monofilament;		
	breakage of corals;		
	leads; planers;		
	lures		

recreational fishing activities targeting coral associated fish/inverts		clearly identify and address ecosystem impacts; consider both direct and indirect impacts; practice activity in ways that do not further jeopardize species; immediate end to overfishing; immediate determination of status of all coral-associate fish/inverts included in FMPs (stop fishing until status known); increase use of no-take MPAs in coral areas to cover at least 20% level identified in US CRAP; require certification that fisheries will not further the decline of Acropora or prevent/hamper recovery (modify management to assure this)	positive impacts of no-take marine reserves
recreational fly fishing			
recreational hook/line			
recreational hookah diving	fins, sitting, standing, buoyancy, weights, grabbing corals	education, mass media, workshops, Channel 5, Comcast, hotels, cruise ships, radio PSAs, billboards, funding for educational materials, boat ramps, gas stations, FL toll booth info, FL boating license, visual check by divers	
recreational lobster - by hand			
recreational photography			
recreational powerboating	anchoring, groundings in shallows, discharge from heads	clarify FL statute 253 (criminal activity clarification), anchor breakaway, mooring buoys, no anchor zones, preserve/sanctuary, education: charts, tank filling stations, boat ramps, bait shops, marinas, with fishing licenses, radio channel for info on coral; benefits of not dumping bilge; pass test via boat license (include coral awareness); bottom finders	
recreational sailboating	anchoring, groundings in shallows, discharge from heads	clarify FL statute 253 (criminal activity clarification), anchor breakaway, mooring buoys, no anchor zones, preserve/sanctuary, education: charts, tank filling stations, boat ramps, bait shops, marinas, with fishing licenses, radio channel for info on coral; benefits of not dumping bilge; pass test via boat license (include coral awareness); bottom finders	
recreational spearfishing			
recreational spearfishing	direct by spear, fish going into corals; physical damage		
recreational spearfishing	shoot & miss; shoots fish into crevice - physical damage; hands break corals		
recreational tank diving	fins, sitting, standing,	education, mass media, workshops, Channel 5, Comcast, hotels, cruise ships, radio PSAs, billboards, funding for educational materials, boat ramps, gas stations, FL toll booth info, FL boating license, visual check by divers	
recreational tropical fish collection			
recreation-based stressors	abrasion; breakage		

recruitment process			
reduction of sedimentation		milestones	
regulations/policy - CZM program			
regulatory agencies	assist in		
l agonolos	conservation		
reintroduction potential problems	Conscivation		
relocation - transplants			
	100 hundles		
reproduction	~100 bundles	to any and the second and affect and a second and affect and	
research		increase funding - nutrient sources, landbased and offshore sources	
research on reproductive ecology	collection of gametes as they are released by colonies in the wild; collection of small tissue samples	include research exemptions in 4(d) rule; allow collection of spawn by recognized scientists for the sulture of larvae for research and restoration	
research vessels	groundings, Sea Tow/salvage, prop damage	boater education, avoid shallows, protocol/permit, replace markers after storms, more markers at reefs ("Danger Shoals")	
researchers	Ĭ		
restoration		funding, "restoration team" volunteer, SEFCRI emergency response/guidelines to groundings, license for boating,	
restoration		buffer?	
restoration - artificial reefs			
restoration - MPAs			
resuspension of sediments	reduction of light; turbidity; interrupt physical/chemical processes; water quality		
revised TPDES regulations (apply to development of >	assist in		
1 acre)	conservation		
Rig removal: A recently published Minerals Manageme	•	iffied 7 species of Caribbean corals on rigs off Louisiana; "when a	The [listing] will create an additional and expensive layer of bureaucracy; the [listing] will lead to increased litigation and loss of scientific credibility
river discharge	1		
Rivers & Harbors Act Corps Permit	density of the	as teaching of any bind on account 1. (1) (0.5)	
roller frame bait shrimping	done in shallow grassbeds in FL Bay	no trawling of any kind on oceanside of Keys/S. FL	
run-off	coral degradation	do not translate this stressor into unduly brudensom regs over far less significant, yet more manageable stressors	
run-off	increased sedimentation		
run-off resulting from development	indirect impacts		
run-off sediments from construction		hold construction sites accountable	

aail baating	anatina Cas	hoster advication, avaid abellavia mustacel/parent replace	
sail boating		boater education, avoid shallows, protocol/permit, replace	
		markers after storms, more markers at reefs ("Danger Shoals")	
	damage		
sailboating		SeaTow call enforcement when moving boats? - required by law	
	heel, [.?.] w/wind	to report groundings	
sailboating	groundings &	education for best removal, TV, radio, billboard, buy fishing	
_	sin[?]	license, boat registration, safe boating, coral conservation, info

sediment accumulation	affects substratum;		
	impact to habitat		
	past to machat		
sediment control		more enforcement; construction contractor education and	
		awareness	
sediment shading		do not translate this stressor into unduly brudensom regs over	
		far less significant, yet more manageable stressors	
sediment, [.?.], lab	5 cm branch tips		
sedimentation	water quality;		
	impact to habitat		
	Jimpact to Habitat		

seine net fishing	no more than 6 full time operations; mostly targets areas with gravel bottom; avoid areas with Elkhorn and Staghorn	do not consider for regulation; utilize local knowledge of these fishermen - let them tell you how and where coral abundance has changed	
seine nets	less than 18' [?]; no regs to keep away from coral; set by free diving; always tended; avoid coral		
septic tanks			
septic tanks	leeching		
septic tanks	leaching		
sewage		nutrient stripping standards, Federal funding, stop permitting direct discharge/outfalls or deep-well injection with only secondary treatment, enforcement of existing regs (Keys No-Discharge Zone, FKNMS regs), expand Keys NDZ to NMS Fed. waters,funding, encourage compliance, education & outreach (knowing the difference b/wn septic and sewer)	
sewage	direct outflow; primary treatement	move to secondary or tertiary treatment	
sewage	nitrogen source for algal blooms; nutrient enrichment	collection of data to add to the understanding of nutrient dynamic and identification of sources	
sewage		Federal funding for advanced nutrient removal in Keys, Broward, Dade, Palm Beach; require tertiary nutrient-stripping treatment in all comprehensive land-use plans for areas near coral reefs; enforce regs already in place; stop permitting deep injection of secondarily-treated waste; prohibit direct ocean discharge; expand Key NDZ to Fed Sanct. waters	
sewage	direct discharge into sea; declining coral health; deterioration of water quality	end Consent Order with EPA allowing input of primary sewage by government plants; better siting of public works plants (out of sensitive mangrove environments); monitoring of plants in private developments; controlling drainage from septic tanks piped directly into natural guts; controlling sewage from live aboard yachts	STFA members mapping sewage inputs around the island
sewage - deep-injection wells		Aliania atau manudan ANAT fan anuda	
sewage - illegal dumping (commercial/personal vessels)		eliminate; require AWT for cruise ships	
sewage - sewer outfall pipes		close down ocean outfalls; extend outfalls; guarantee improvement of treatment	

sewage (partially to completely untreated)	pumped into ocean; damages reeds	stop such activity all-together	
sewage discharges			
sewage outfalls		more enforcement	
sewage run-off		hold sewer discharge accountable; police activity	
sewer outfalls	coral degradation	do not translate this stressor into unduly brudensom regs over	
		far less significant, yet more manageable stressors	
sewer system implementation		need funding	
Shallow injection wells regs		enforcement of existing regulations	
sheet pile wall pier	resuspension of sediments		
shelling			
shelling	not in elkhorn/staghorn zones		
ship paint	impacts on Ac		
ships and boats	anchoring	discourage anchoring near coral reefs	
Shoreline Priority Plan	existing sites have priority	enforcement and compliance (\$, staff)	
slop-tank use	1 - 3	scrutinize use	
small power boats	anchoring, groundings in shallows	clarify FL statute 253 (criminal activity clarification), anchor breakaway, mooring buoys, no anchor zones, preserve/sanctuary, education: charts, tank filling stations, boat ramps, bait shops, marinas, with fishing licenses, radio channel for info on coral; pass test via boat license (include coral awareness); bottom finders	
snail predation			
snail removal			
snorkeling	anchoring, standing, holding, gear	drift diving, clarify FL statute 253 (criminal activity clarification), anchor breakaway, mooring buoys, no anchor zones, preserve/sanctuary, education: charts, tank filling stations, boat ramps, bait shops, marinas, with fishing licenses, radio channel for info on coral; diver awareness education: fin length, buoyancy, gear storage (cameras); "When you touch me, I die." criminal/civil penalties, "What is Acropora?"	
snorkeling	standing, fins, cameras, holding, touching, laying on coral	education, orientation on way out not to touch, info at tank fills, laminated info with vessel registration (anchoring tips, corals), consequences (criminal and civil), repair shops, collect FL numbers into database, SeaTow call enforcement when moving boats? - required by law to report groundings	
snorkeling		discourage use of gloves, weight, educate at dive shops (gear, air, rental), buoyancy, coral care, fin type, billboards, radio PSAs, educational signs at boat docks/ramps, tents at hotels/restaurants	

snorkeling	on surface (fins, walking, standing); 7 dive shops on one island : 50 mooring buoys; sunscreen impacts on reef?; contact with hand	target sand for shore entry; all operators give conservation talk; add video?; selection [?]	
snorkeling		conservation education; vests or "noodles" for non-swimmers; Dept. of Tourism "endorsement" (require conservation training in order to receive it)	
snorkeling	fins, sitting, standing,	education, mass media, workshops, Channel 5, Comcast, hotels, cruise ships, radio PSAs, billboards, funding for educational materials, boat ramps, gas stations, FL toll booth info, FL boating license, visual check by divers	
Society for Marine Env	NEW response, emergency permit		
spatial modeling Ap and future Ac	potential habitat, W + E wastes		
spawn collection		outreach	
spearfishing	spear strike	education	
spearfishing	physical damage by collection		
sponge boring		do not translate this stressor into unduly brudensom regs over far less significant, yet more manageable stressors	
sponging	not in elkhorn/staghorn zones		
State fishing regulations		include consequences and anchoring	
STJ & STT - ocean model, ocean currents, spawning,			
connectivity			
stone [?] traps		target spots, buoy scope, trap retrieval, after season dischar[?]	
stonecrab traps	on seagrasses and corals in the FL Keys; offshore traps have no impact (do not get pushed up on reef during storms)	only time there is potential impact is during hurricanes; areas occupied by Acropora are typically avoided; do not consider in 4(d) because all activity occurs on Gulf side of Keys	undergoing similar reduction to lobster trap fishery in Keys
stonecrabbing storm damage	Gulf side where no known populations of these corals; done in sandy/grassy bottom	include these areas in any buffer zone concept  enforcement of existing regs	

stormwater discharge	nitrogen source for	collection of data to add to the understanding of nutrient	
	algal blooms;	dynamic and identification of sources

## Acropora sp. Conservation Workshops: General Questions and Comments

QUESTION	ANSWER	COMMENT
What is the immediate impact of the final	Once the threatened listing for elkhorn and	
listing of elkhorn and staghorn corals as	staghorn corals became effective on June 9, 2006,	
threatened?	the immediate impact is only on actions carried out,	
	funded or authorized by any federal agency. Take	
	of either species is not prohibited as a result of the	
	listing because the prohibitions listed in section 9 of	
	the ESA are not automatically extended to	
	threatened species as they are when a species is	
	listed as endangered. Thus, the listing	
	determination for elkhorn and staghorn corals	
	means only that the federal agency responsible for	
	any actions affecting either of the two species must	
	undergo consultation with NOAA Fisheries Service	
	(as mandated by section 7 of the ESA). NOAA	
	Fisheries Service will determine whether the	
	federal action jeopardizes the continued existence	
	of the affected coral species.	
		NOAA Fisheries Service should, in their efforts to
		conserve elkhorn and staghorn corals, consult and
		coordinate with the Southeast Florida Coral Reef
		Initiative (SEFCRI), other Local Action Strategy (LAS)
		efforts, and international coral organizations.
Did the NOAA Fisheries Service Protected	The NOAA Fisheries Service Protected Resources	
Resources Division conduct a review of	Division staff at the <i>Acropora</i> sp. Conservation	
several different federal construction	Workshops are not familiar with the proposed	
projects, including the proposed pipeline to	pipeline projects for the east coast of Florida, as	
the Bahamas for natural gas?	they have not reviewed any of the project	
	documents.	

What about recovery planning for the two species?	NOAA Fisheries Service is required to develop and implement a recovery plan after a species is added	
	to the Endangered Species List. Recovery is the	
	methods and procedures necessary to restore	
	species to the point that protections under the ESA	
	are no longer needed. Although recovery actions	
	can, and should, start immediately upon listing a	
	species as endangered or threatened under the	
	ESA, prompt development and implementation of a	
	recovery plan will ensure that recovery efforts	
	target limited resources effectively and efficiently	
	into the future. The recovery plan serves as a road map for species recovery – it lays out where we	
	need to go and how best to get there. NOAA	
	Fisheries Service expects to convene a recovery	
	team to develop the recovery plan for the two	
	species.	
		The scheduled time for the Acropora sp. Conservation
		Workshops (6 – 8 pm) is a difficult time for attendance
		in the Ft. Lauderdale area because of traffic.
Now that elkhorn and staghorn corals are	Currently, no prohibitions on take under the	
listed as threatened, are there increased	provisions of the ESA apply to elkhorn and	
penalties?	staghorn corals. If NOAA Fisheries Service	
	publishes a proposed 4(d) rule for the two	
	threatened corals, it may extend some or all of the prohibitions listed in section 9 of the ESA. Should	
	the proposed 4(d) rule become final, then violations	
	could result in civil or criminal penalties, as outlined	
	in section 11 of the ESA. Civil penalties include	
	fines of up \$25,000 for <i>each violation</i> . Additionally,	
	criminal penalties include fines of up to \$50,000	
	and/or imprisonment (for up to one year).	

By what date will NOAA Fisheries Service	NOAA Fisheries Service hopes to complete its	
draft a proposed 4(d) rule?	analysis to determine if any 4(d) rules are	
(1)	necessary and advisable for the conservation of	
	these corals by the end of the year. Once a	
	proposed 4(d) rule is published in the Federal	
	Register, a formal public comment period will open	
	and a series of public comment hearings may be	
	held in the region.	
Is it possible that areas where corals grow	NOAA Fisheries Service concurs that this is	
best may depend on where disease(s) is	possible.	
(are) absent?		
		The proposed 4(d) rule should address existing
		fisheries management regulations and mandate a
		review of trap fisheries management.
		NOAA Fisheries Service should coordinate with
		existing education and outreach efforts.
What about the sale of dead specimens of	Florida has legislation in place that makes it illegal	
elkhorn and staghorn corals in Florida?	to collect, harvest, or sell stony corals (including	
Importing the two species should be	elkhorn and staghorn corals).	
prohibited.	,	
		The Glenn Patton website has a statement on the sale
		of dead corals.
		Exemptions for the possession of dead coral species
		for educational facilities should be considered.
		Artificial casts of coral species should be used instead
		of dead specimens.
		Confiscated specimens of coral should be used.
What about coral farms?	If a 4(d) rule extends take prohibitions to corals, it	
	may be possible for NOAA Fisheries Service to	
	exempt certain activities from some or all of ESA	
	section 9 through the 4(d) rule; however, specific	
	conditions may be applied.	
		The Florida Keys composes 98% of the import market
		for dead corals.
		The funds generated by licensing fees should be used
		to fund elkhorn and staghorn conservation efforts.

		There needs to be a governmental mechanism at the territorial or local level to address direct grounding impacts (i.e., a mechanism to investigate groundings, authority to assess fines and penalties, process for non-groundings (e.g., barge landings), selective process, and reclamation funds).
Will NOAA Fisheries Service be cataloguing critical habitat? What efforts are there to identify those areas?	NOAA Fisheries Service is gathering information to determine the extent to which designation of critical habitat for elkhorn and staghorn corals is appropriate through several different processes. The first effort to gather information pertaining to areas of critical habitat occurred during the comment period for proposed rule to list elkhorn and staghorn corals. The second effort consists of soliciting specific information during these <i>Acropora</i> sp. Conservation Workshops. Last, NOAA Fisheries Service is actively seeking Geographic Information Systems (GIS) data on known locations of <i>Acropora</i> sp. populations. All of these methods of information gathering will inform NOAA Fisheries Service designation of critical habitat for elkhorn and staghorn corals. Any areas designated as critical habitat will be catalogued in the Code of Federal Regulations.	
		Consider obtaining a list of data sources for critical habitat information. Perhaps NOAA Fisheries Service should contact Bill Fisher in EPA's Gulf Breeze Lab.
		NOAA Fisheries Service should notify the public of the public comment hearings for the proposed 4(d) rule and designation of critical habitat using television and radio
		Emails of those on mailing list There should be a NOAA Fisheries Service Virgin Islands coordination office. NOAA Fisheries Service could work out of the EPA Virgin Islands coordination office.

		NOAA Fisheries Service should formulate a
		communications strategy by working with Alissa
		Barron of the Coral Reef Conservation Program.
		Consider that areas in which the population density of
		elkhorn and staghorn corals increased are areas in
		which critical habitat has increased.
		There is a natural cycle of coral death, as illustrated by
		the existence of coral white sand beaches in the U.S.
		Virgin Islands.
		There is agency confusion.
		For mooring, there should be GPS locations where
		ships may anchor.
		Place the burden on the homeowner (i.e., have them
		demonstrate that activities are not affecting elkhorn
		and staghorn corals).
		The listing of elkhorn and staghorn corals has political
		ramifications that can have a huge negative impact on
		commerce. Additionally, the listing is not about
		science, but about politics (specifically, global warming
		politics).
		A map of A. cervicornis is Palm Beach County was
		provided to NOAA Fisheries Service.
		The names, addresses, and specific comments from
		the peer reviewers of the Atlantic Acropora Biological
		Status Review was requested.
What about the owners of sovereign	The provisions of the ESA apply to any person	
submerged lands south of Long Key, FL?	subject to the jurisdiction of the United States (i.e.,	
How are they affected by the listing of	all United States citizens).	
elkhorn and staghorn corals as threatened?		
		NOAA Fisheries Service should receive input from
		members of the St. Croix fishing community in order to
		maintain an unbiased comment period.
		The causes of many coral diseases have been
		discovered and are entirely avoidable through good
		management of coral reefs.

There are many ways to manage disease and elevated
sea surface temperatures.
Reef Crowns are a subsequent improvement to the
design of their predecessor, Rosettes.
Coral 2000 Volume 1 and 2 document the Coral
Nusery Project and the ongoing Reef Relief Coral
Photo Monitoring Servey and were presented to NOAA
representatives and members of the FKNMS
Sanctuary Advisory Board.
Reef Relief submitted two video transects of Rock Key
Reef and information on the coral nursery at Western
Sambo, with the recommendation that all corals in the
Acropora genus found in the Caribbean basin be
further protected, in response to the Federal Register
notice dated 01/15/1999.
The Atlantic Acropora Biological Status Review did not
mention Reef Relief's efforts or recommendations,
including mention of the extensive ongoing public
awareness and outreach activities designed and
implemented by Reef Relief.
